

Mass Delete Service

Why Mass Delete?

Over time, all organizations build up old records in their CRM systems that are no longer needed to run the business. There are several reasons it is helpful and necessary to archive and then remove these records from they system, including:

- Cleaning up duplicates
- Removing clutter from the User Interface
- Preparing for integration to another system
- Reducing / avoiding additional storage costs

How Mass Delete Works

- Your CRM Administrator will export an archive of the data to be deleted and adjust the export file as needed, to include only the records targeted for deletion.
- Then, simply send over the file with the Ids to be deleted and provide login information.
- Our resources will work with your team to identify how many records can be deleted each day, without running into the web service operation limits.
- The mass deletes will then be run in batches using our proprietary mass delete tool and exception logging will be returned for any rows that cannot be deleted.

Mass Delete Pricing

Less than 100K records - \$2,000

100k to 1M records - \$5,000

1M to 5M records - \$10,000

5M+ records - \$20,000

1-Year Data Maintenance Plans are also available for organizations wishing to put an ad-hoc or scheduled delete plan together for regular archival and deletion of records.

Mass Delete MOD

Delete up to **1 Million** records
per month for **just \$5,000 one-time!**

Why Mass Delete?

Over time, all organizations build up old records in their CRM systems that are no longer needed to run the business. There are several reasons it is helpful and necessary to archive and then remove these records from they system, including:

- Cleaning up duplicates
- Removing clutter from the User Interface
- Preparing for integration to another system
- Reducing / avoiding additional storage costs

How Mass Delete Works

upsourcIT's Mass Email MOD product gives Oracle CRM On Demand administrators the ability to log into a secure portal and configure one or more mass record deletion jobs that can be run as a one-time job or on an automated schedule.

- A client agent is installed on a local workstation or server and connects to the web portal to retrieve the configuration settings.
- All jobs are then performed on the local machine and execution logs are passed back to the portal. This allows for lower volume mass deletions to be performed on an ongoing basis, without incurring the additional expert services and system resource costs associated with the upsourcIT managed Mass Delete Service.
- Settings are controlled via the web, a user can log in from any of the supported browsers and devices to make setting changes and view logs of past job execution.
- Our resources will work with your team to identify how many records can be deleted each day, without running into the web service operation limits.

Mass Delete MOD Pricing: \$5,000 One-Time
